

高级计算机网络第三次实验报告

SA16011112 殷康熙

1. 实验目标

使用 Pyretic 实现第二层 Mac 地址上的防火墙。

2. 网络的拓扑结构

由上图所示的拓扑结构可以看出，本次实验的网络拓扑非常简单，6 个主机直接连接到交换机上面，控制器为 Pyretic 控制器。

3. 防火墙代码及相关的解释

#本策略使用的黑名单方法，黑名单中指定禁止的策略，其他的默认通过。

#导入相关的包以及相关模块

```
from pyretic.lib.corelib import *
```

```
from pyretic.lib.std import *
```

```
from pyretic.examples.pyretic_switch import act_like_switch
```

```
import os, csv
```

```
policy_file = "%s/pyretic/pyretic/examples/firewall-policies.csv" % os.environ[ 'HOME' ]
```

```
def main():
```

```
    #初始化
```

```
    not_allowed = none
```

```
    #从 csv 读取策略文件
```

```
    with open(policy_file, "r") as policy_content:
```

```
        dictReader = csv.DictReader(policy_content)
```

```
        #添加禁止策略, 双向通信都禁止
```

```
        for d in dictReader:
```

```
            not_allowed = not_allowed +  
            ((match(srcmac=MAC(d['mac_0']))&match(dstmac=MAC(d['mac_1'])) ) +  
             ( match(srcmac=MAC(d['mac_1']))&match(dstmac=MAC(d['mac_0']))))
```

```
    #添加许可策略, 表示为禁止策略取反。
```

```
    allowed = ~not_allowed
```

```
    #先输出一下当前规则
```

```
    print allowed
```

```
    # 将允许的路由输入给作为 pyretic_switch 中的 act_like_switch
```

```
    return allowed >> act_like_switch()
```

4. 防火墙规则

id,mac_0,mac_1 1,00:00:00:00:00:01,00:00:00:00:00:04

```
2,00:00:00:00:00:02,00:00:00:00:00:05
3,00:00:00:00:00:03,00:00:00:00:00:06
```

如上表所示，为 firewall-policies 的规则，首列为规则编号，后面跟着的两个为不允许通讯的两个主机的 Mac 地址。

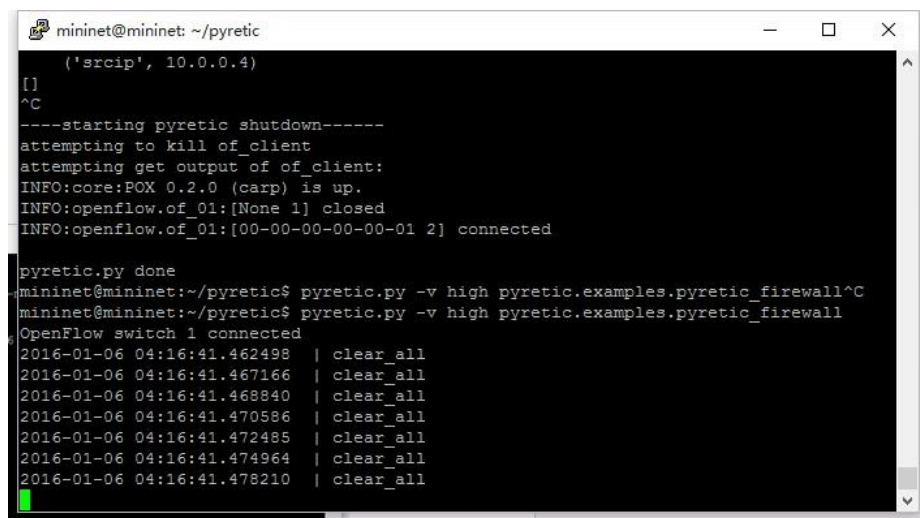

5. 实验及相关结果

5.1 启动控制器

将上述两个文件保存到 Pyretic/examples 的目录下之后，执行以下命令启动控制器。

```
pyretic.py -v high pyretic.examples.pyretic_firewall
```

执行之后可以观察到控制器已经启动（如图 5.1），没有报错说明防火墙程序没有问题。

```
mininet@mininet: ~/pyretic
('srcip', 10.0.0.4)
[]
^C
----starting pyretic shutdown-----

```

5.2 创建拓扑

执行以下命令创建一个 6 个节点连接到一个交换机上面的网络拓扑。

```
sudo mn --topo single,6 --mac --switch ovsk --controller remote
```

执行完成之后观察到如图 5.2 所示的界面，表示拓扑创建成功。

```
mininet@mininet: ~/pyretic/pyretic/examples
*** Removing excess kernel datapaths
ps ax | egrep -o 'dp[0-9]+' | sed 's/dp/nl:/'
*** Removing OVS datapaths: ovs-vsctl list-br
*** Removing all links of the pattern foo-ethX
ip link show | egrep -o '(\w+-eth\w+)'
*** Cleanup complete.
mininet@mininet:~/pyretic/pyretic/examples$ sudo mn --topo single,6 --mac --switch ovsk --controller remote
*** Creating network
*** Adding controller
*** Adding hosts:
h1 h2 h3 h4 h5 h6
*** Adding switches:
s1
*** Adding links:
(h1, s1) (h2, s1) (h3, s1) (h4, s1) (h5, s1) (h6, s1)
*** Configuring hosts
h1 h2 h3 h4 h5 h6
*** Starting controller
*** Starting 1 switches
s1
*** Starting CLI:
```

5.3 Pingall 测试

拓扑创建完成之后，执行 `pingall` 命令，观察到如下图 5,3 所示的界面，可以很明显的看出定义的防火墙策略已经生效。

```
mininet@mininet: ~/pyretic/pyretic/examples

6. 总结

本次实验使用 Pyretic 控制器，使用控制器实现了 Mac 层上的防火墙相关的策略。也很容易从本次 Project 中看出，使用 SDN 网络实现防火墙策略的管理比传统网络更加容易。
